We offer the following services:

-  Consultancy
-  Supply
-  Installation
-  Calibration
-  Maintenance

of Medical Equipment

## The National Health Care Technical Services (NHCTS) Programme

The NHCTS Programme was started in 1998 to support mission health facilities in medical equipment maintenance, procurement and installation. The programme is hosted at CHAK and serves both CHAK and Kenya Episcopal Conference (KEC) facilities.

NHCTS offers a wide range of biomedical equipment services and repair options. Whether you need installation and setup, equipment repair, preventive maintenance, safety testing or just to order parts, NHCTS has you covered. A professional team is available to meet your needs at all times. Our goal is excellent service at competitive rates!

### Services offered

Our services are categorized into three broad groups:

- General Services
- Anaesthesia services
- X-ray Services

### General services

Including supply, repair and service of all diagnostic, therapeutic and research equipment ranging from microscopes, centrifuges, electrosurgical diathermy, suction machines, sterilizers, oxygen concentrators, among others.

### X-Ray Services

This includes supply, installation, repair, calibration and service of fixed and mobile x-ray, ultrasound and CT scan machines.

The workshop is also licensed to carry out radiation safety inspection by the Radiation Protection Board.

### Anaesthesia Services

We offer Planned Preventive Maintenance (PPM), repair work, safety inspection services (especially on donated equipment), installation as well as calibration for anaesthesia equipment.

Our services also extend to other related equipment and systems such as gas piping, operating theatre and Intensive Care Unit (ICU) equipment.

### Planned preventive maintenance

An ounce of care is worth a pound of cure! Follow manufacturer recommendations for maintaining your equipment and you will not only save money but also have less downtime and fewer liabilities.

The NHCTS manages preventive maintenance of your key equipment. We set up the schedules and allow you to focus on your patients.
